

OVIGO APPLICATION WALKTHROUGH

Product Feedback & Development Requirements

Overall Feedback

The development team has completed a strong foundation of the Ovigo marketplace, including Traveler, Local Expert, Host, Guide, Rent-a-Car, Booking, Payment, Custom Trip, Admin, Commission, Payout, Trust, Advertising, Fraud, Notification and Reporting modules.

However, several features shown in the walkthrough appear to be basic/functional versions of the requirements. The next priority should be closing the gaps against the PRD and completing the business logic, rather than only adding new screens or features.

What Needs to Be Added / Further Developed

LOCATION ARCHITECTURE — HIGH PRIORITY

The PRD requires Ovigo's location structure to support:

Division → District → Upazila → Destination/ Attraction/City

The walkthrough currently demonstrates:

Country → Region → City → Attraction

Need to add/verify:

- Division
- District
- Upazila
- Destination
- Attraction
- City
- Map coordinates

- Location tags

Every tour, stay, Expert, Guide, vehicle and relevant service must be connected to the correct location.

Location tagging must drive search, matching, discovery and marketplace visibility.

DESTINATION-CENTRIC DISCOVERY

Ovigo should not function only as a tour/stay booking platform.

A destination should become the central discovery point.

Example:

Sreemangal

→ Local Experts

→ Tours

→ Experiences

→ Stays

→ Guides

→ Transport

→ Restaurants/Food

→ Activities

→ Local Services

→ Nearby destinations

Need to further develop:

- Destination landing pages
- Location-based search
- Location-based service discovery
- Nearby services
- Expert-to-destination matching
- Tour-to-destination matching
- Location-based recommendations

COMPLETE LOCAL EXPERT TOUR BUILDER

Current tour creation includes itinerary, departures, meals, activities, add-ons and transport.

The PRD requires more detailed structured information.

Need to add/verify:

- Local Expert Profile (who craft the tour)
- Group Size (How many People can join)
- Tour Type: Adventure/ Romantic or
- Guide Profile (Who will guide them)
- Calendar Date (Multiple date)

In a section of the detail page

Stay

- Property Type
- Room/category
- Mention Property if it has already listed on Ovigo

Transportation

- Vehicle type/model
- AC
- Capacity
- Driver profile/Mentioned if already added

Locations

- Location tag (which place they offer to visit)
- Visit date
- Arrival/departure time
- Activity

Food

- Breakfast/lunch/dinner
- Snacks/drinks
- add-ons

Activities

- Duration
- Location
- Difficulty
- Age
- Equipment
- Capacity
- Safety
- Guide requirement

Safety

- Emergency contact
- Women/child safety check
- Weather risk
- Activity risk

Pricing

- Adult
- Child
- Infant
- Group
- Couple
- Seasonal/weekend pricing
- Tax
- Service charge
- Deposit
- Payment deadline

Policies

- Cancellation
- Refund
- Child

CUSTOM TOUR & BIDDING — COMPLETE LOGIC

The basic bidding workflow is working.

Need to ensure the complete PRD flow:

Traveler Request → Expert Eligibility → Bid → Question → Revision → Comparison → Shortlist
→ Acceptance → Inventory Revalidation → Booking → Payment

Traveler request should include:

- Destination
- Locations
- Dates
- Adults/children/infants
- Budget
- Stay
- Room
- Transport

- Pickup
- Food
- Activities
- Accessibility
- Safety/privacy
- Guide
- Special occasion
- Additional notes
- Bid deadline

Expert bid should include:

- Complete itinerary
- Stay Name
- Transport Details
- Food Menue
- Activities
- Guide
- Pickup/drop-off
- Included/excluded services
- Add-ons
- Price breakdown
- Taxes/fees
- Deposit
- Cancellation terms
- Bid validity

LOCAL BUSINESS / REFERRAL NETWORK

The referral function exists, but it needs to become a complete network system. Local experts can add business details on Ovigo and send invites to manage their business on Ovigo.

Experts should be able to add/refer:

- Hotels
- Resorts
- Homestays
- Guesthouses
- Restaurants
- Bike or other transportation
- Rent-a-Car
- Activity providers
- Photographers

- Local product brands
- Equipment providers
- Cultural/event services

Need to add:

- Business ownership type
- Owner invitation
- Business verification
- Commission agreement
- Referral attribution
- Network commission
- Tour-curation commission
- Business approval
- Duplicate-business prevention

The system must track:

Who added → Who owns → Who sold → Which booking → Which commission → Commission period → Acquisition source

GUIDE MANAGEMENT

Need to further develop:

- Expert–Guide supervision relationship
- Guide acceptance
- Assignment lifecycle
- Guide availability
- Guide performance
- Guide earnings
- Guide verification
- Certification (Level 1 or 2) best in Wild safari
- Suspension/restriction
- High-risk activity controls

MULTI-ROLE PARTNER ACCOUNT

The platform supports multiple partner roles, but the complete role architecture needs to be verified.

Need:

- Separate role approval

- Separate verification
- Role-specific dashboard
- Role switch
- Role-specific permissions
- Role-specific earnings
- Individual role suspension
- Complete account suspension

One user should be able to have multiple approved roles without creating separate accounts.

COMMISSION ENGINE

Commission management exists, but the complete calculation and attribution system needs to be verified.

Need support for:

- Global commission
- Role commission
- Category commission
- Partner-specific commission
- Referral commission
- Network commission
- Effective date
- Expiry date
- Calculation preview
- Correct attribution

Commission must automatically flow to the correct partner after a completed eligible transaction.

PAYOUT / ESCROW

Need to ensure:

- Escrow balance
- Automated payout split
- Held payouts
- Failed payouts
- Manual approval
- Refund impact
- Partial refund
- Payout reversal
- Bank/mobile wallet details
- Payout statement

- Commission deduction

VERIFICATION & TRUST

Need stronger implementation of:

- Identity verification
- Business verification
- Property verification
- Vehicle verification
- Guide verification
- Document expiry
- Re-verification
- Trust badges
- Certification
- Badge validity
- Badge revocation
- Verification history

ADMIN ROLE & PERMISSION SYSTEM

Currently the walkthrough indicates Admin and Super Admin are functionally similar.

This needs to be further developed according to the PRD.

Different roles should have different permissions:

- Super Admin
- Finance Admin
- Operations Admin
- Support
- Moderator
- Verification team

Example:

Finance Admin: Can process payouts but cannot approve identity verification.

Support: Can view bookings but cannot change commission rules.

Property Manager: Can update availability but cannot change bank details.

Guide: Cannot edit an Expert's tour.

All important Admin actions must be audit logged.

NOTIFICATION SYSTEM

A platform-wide notification feature exists.

Need to ensure automated event-based notifications for:

- Partner application
- Approval/rejection
- Document expiry
- Tour approval
- Custom request
- New bid
- Bid acceptance
- Booking
- Payment
- Booking confirmation
- Departure
- Check-in
- Guide assignment
- Cancellation
- Refund
- Dispute
- Payout
- Review
- Message
- Advertisement budget

Channels:

In-app + Push + Email + SMS where required

FRAUD & RISK

Basic fraud detection exists.

Need to further develop rules for:

- Multiple accounts
- Reused identity documents
- Suspicious payout accounts
- Fake bookings
- Self-booking
- Review manipulation
- Payment diversion

- Repeated cancellations
- High refund rate
- Sudden price changes
- Duplicate properties
- Expired vehicle documents
- Suspicious commission networks

ANALYTICS & REPORTING

Reporting exists, but should be checked against the PRD KPI requirements.

Need:

- Booking performance
- Revenue
- Commission
- Payout
- Refund
- Partner performance
- Expert performance
- Host performance
- Guide performance
- Property occupancy
- Tour performance
- Custom-bid conversion
- Advertisement performance
- Location performance
- Customer retention
- Cancellation analysis
- Dispute analysis
- Fraud analysis

Priority for Next Development Cycle

HIGH PRIORITY

1. Correct/full location hierarchy
2. Destination-centric discovery
3. Complete Local Expert tour builder
4. Complete custom tour/bidding logic
5. Business referral/network system
6. Multi-role permission architecture

7. Commission and attribution engine
8. Admin RBAC and audit logs

● MEDIUM PRIORITY

9. Guide lifecycle
10. Verification/trust system
11. Notification automation
12. Fraud/risk rules
13. Analytics/KPI completion
14. Advertising/monetization refinement
15. Escrow and automated payout split

● QA / VALIDATION

16. Booking edge cases
 17. Inventory protection
 18. Payment/refund scenarios
 19. Review eligibility
 20. Security and permission testing
-

Final Development Direction

The current build has established a strong marketplace foundation. The next stage should not be focused mainly on creating more screens.

The priority should be:

PRD → Feature → Business Logic → Data Structure → Permission → Validation → Integration
→ QA → Acceptance

For every requirement, the team should confirm:

Implemented / Partially Implemented / Not Implemented / Needs QA

The Product Requirements Document remains the source of truth for determining completion.

The objective is to ensure that Ovigo becomes not simply a platform for booking tours and stays, but a location-based connected tourism marketplace where Experts, Hosts, Guides, transport providers and local businesses work together around each destination.

New Scope

- Outbound international packages

Can we add a feature where travel agencies can list their outbound tour packages? Like Singapore, Indonesia tour. For the search tour for Outbound we need to add a new input; in the tour search section.

UI and Others Feedback:

COLOR ISSUE: Brand colors ignored

Our Primary Colour is: #000094

Secondary Colour is: #BEFF50

BIGGEST ISSUE — NO TRAVEL IMAGES

This is the first thing I would ask the team to fix. The walkthrough describes Ovigo as a travel marketplace, but many of the actual listing screens are essentially **text-only cards**.
